

Tatu Leppänen

Managing Director

Oseir

Advanced spray diagnostics as a tool for improving cost efficiency, quality and customer satisfaction - inc. examples

Abstract

With longer spray runs and large scale additive manufacturing, demands for the quality control have risen tremendously. To address these needs Oseir diagnostics has developed a strong line up of equipment with unique capabilities that are allowing e.g. full time on-online diagnostics through out the whole spray campaign

Biography

Tatu Leppänen holds a Msc degree in Industrial engineering and production technology. Degree which has lead him to live seven years abroad holding several director positions with international responsibilities both as an expatriate and based in Finland. While working in a stock listed companies provided the needed challenges and possibilities for business growth by far the most interesting position is the current being MD and shareholder at Oseir. There is hardly anything more satisfying than listening to our talented team's success stories when they have created applications that benefit customers globally, except when I have a chance to see the smile on our customer's face. That is priceless! My dream is to find the time to study Phd from this field, after all I wouldn't like to be second to my wife 😊
